

ADITYA HEDAU

Full Stack Developer · MEAN Stack · NestJS

+91 9561700261 | adityahedau293@gmail.com | linkedin.com/in/aditya-hedau | github.com/Aditya-2004-GitHub

PROFESSIONAL SUMMARY

Full Stack Developer currently working at Iceico Pvt. Ltd., with hands-on experience building Angular-based production websites and NestJS-powered backend systems. Proficient in the complete MEAN stack with additional expertise in NestJS — including decorators, Guards, and modular architecture. Skilled in Cloudinary media integration, MongoDB Atlas cloud database management, JWT authentication, and role-based access control. Passionate about writing clean, scalable code and delivering real-world solutions that reduce client dependency and improve operational efficiency.

WORK EXPERIENCE

Full Stack Developer

2025 – Present

Iceico Pvt. Ltd. · Nagpur, Maharashtra

- Delivered 5–6 production Angular websites (latest version) for clients — building reusable component libraries, implementing lazy loading, reactive forms, and routing for a smooth, responsive user experience across devices.
- Built a full-featured CMS admin panel using NestJS that allows clients to independently add, update, and delete website content (text, images, page sections) — eliminating the need for developer involvement in routine content changes.
- Integrated Cloudinary for cloud-based image storage and CDN delivery — managing upload pipelines, secure URL generation, and image transformation directly within the NestJS backend.
- Designed RESTful APIs with full CRUD capabilities using NestJS decorators (@Controller, @Get, @Post, @Put, @Delete, @Body, @Param, @UseGuards) following modular, scalable architecture patterns.
- Implemented JWT-based authentication and role-based access control (RBAC) using NestJS Guards, securing admin routes and ensuring only authorized users can access write and delete operations.
- Managed MongoDB Atlas cloud database with Mongoose ODM — designed schemas, maintained data relationships, and optimized queries for reliable, high-availability data storage.
- Collaborated directly with clients to translate design and content requirements into technical specifications, ensuring timely delivery and alignment with business goals.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, HTML5, CSS3
Frontend	Angular (v17+), Bootstrap, Responsive Design, Angular Routing & Forms
Backend	NestJS, Node.js, Express.js, RESTful API Design, MVC Architecture
Databases	MongoDB, MongoDB Atlas, Mongoose ODM, SQLite
Auth & Security	JWT Authentication, Role-Based Access Control (RBAC), NestJS Guards
Cloud & Media	Cloudinary (upload, transformation, CDN), MongoDB Atlas
Tools	Git, GitHub, Postman, VS Code, CI/CD
Concepts	CRUD Operations, Database Schema Design, API Integration, Debugging, DTOs

PROJECTS

Dynamic CMS Admin Panel | [NestJS](#) · [Mongoose](#) · [MongoDB Atlas](#) · [Cloudinary](#) · [JWT](#) 2026

- Developed a headless CMS backend using NestJS enabling clients to fully manage website content through a secure admin interface — no developer needed for day-to-day content updates.
- Implemented NestJS Guards for route-level authorization and JWT token validation; structured permissions so only admin-role users can access create, update, and delete endpoints.
- Integrated Cloudinary API for end-to-end image management: upload, secure public URL generation, and CDN-optimized delivery — reducing image load times significantly.
- Used Mongoose with MongoDB Atlas to design flexible schemas for pages, sections, and media assets, supporting dynamic content structure across multiple website types.

Clinic World | [Angular 19](#) · [Node.js](#) · [Express](#) · [MongoDB](#) 2025

- Built a full-stack MEAN application for clinic-patient management — patients can search nearby clinics by location and specialty, view doctor profiles, and book appointments in real time.
- Designed secure REST APIs for appointment booking, doctor and clinic CRUD, and user authentication with JWT tokens and role-based access for patients and admins.
- Implemented a fully responsive Angular frontend with real-time UI updates and smooth cross-device navigation for an accessible user experience.

E-Commerce Backend | [Node.js](#) · [Express](#) · [MongoDB](#) · [JWT](#) 2024

- Engineered a scalable RESTful backend for an e-commerce platform — covering product catalogue, user authentication, cart management, and order processing APIs.
- Applied JWT authentication with protected route middleware and followed the MVC pattern to ensure clean code separation and maintainability.
- Used Git with structured branching strategies and pull request reviews to maintain code quality and enable effective team collaboration.

Quiz Master | [Python](#) · [Flask](#) · [HTML5](#) · [CSS](#) · [JavaScript](#) 2024

- Full-stack quiz platform where admins schedule quizzes with time windows and users attempt them on assigned dates — built on Python Flask with session-based auth.
- Implemented score tracking with visual performance analytics using interactive graphs for users to monitor their progress over time.

Mini Projects

[Pizza-Hut Clone](#) · [Mina Store](#) · [Sweet Store](#) · [E-Shop](#) · [Dribbble Clone](#) · [Drag-N-Drop](#) · [Portfolio](#) · [CRUD APIs](#) · [User Management System APIs](#) · [Machine Test APIs](#)

EDUCATION

Bachelor of Computer Science (B.Sc. CS) 2025

[Dr. Ambedkar College](#) · [Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur](#)
